

Live Trainer Evaluation (Session Flow Review)

1) Opening & First Impression (0:06)

What You Did

You started directly with:

“data warehouse fundamentals... these are the 4 main stages...”

Issue

Critical — *No introduction, no context, no audience anchoring*

Why It Matters

This immediately reduces trainer authority. It feels like content reading, not session ownership.

Trainer Fix

“Good morning everyone... (pause)

Today we’ll understand how data warehousing works in Microsoft Fabric — from ingestion to analytics... and how each layer connects to real-world reporting.”

Micro-Coaching

Start every session with **who you are + what learners will gain**

2) Concept Explanation — Data Warehouse Stages

What You Did

- Explained ingestion → storage → processing → analytics
- Clear sequence, but *surface-level explanation*

Issue

Major — *Missing depth and business anchoring*

Why It Matters

Intermediate learners expect **why each stage exists**, not just steps

Trainer Fix

“Ingestion brings raw data in... (pause)

processing makes it usable... and warehousing ensures fast analytics — that’s where business decisions actually happen.”

Micro-Coaching

Always connect **concept → business impact**

3) Fabric Warehouse vs Lakehouse

What You Did

- Compared structured vs all data
- Incorrect/over-simplified claims (e.g., “lakehouse doesn’t support T-SQL”)

Issue

Critical — *Conceptual inaccuracies*

Why It Matters

Wrong statements → immediate credibility loss in enterprise sessions

Trainer Fix

“Lakehouse supports SQL via SQL endpoint... (pause)

but warehouse is optimized for structured analytics workloads with stronger relational control.”

Micro-Coaching

Validate Microsoft Learn alignment before stating comparisons

4) Learner Question — When to Use Lakehouse vs Warehouse (5:15)

What You Did

- Gave generic answer
- Missed real-world scenario mapping

Issue

Major — Weak scenario-based explanation

Trainer Fix

“Use Lakehouse when data variety is high — logs, JSON, files... (pause)

use Warehouse when you need structured reporting — finance dashboards, BI models.”

Micro-Coaching

Answer every “when to use” → with **real business scenarios**

5) Structured vs Unstructured (6:40 – 10:00)

What You Did

- Explained definitions correctly
- Struggled when probed deeper (image text classification)

Issue

Major — Rigid understanding, not flexible thinking

Trainer Fix

“The image is unstructured... (pause)

but extracted text from it can become structured if processed — context matters.”

Micro-Coaching

Think in terms of **data lifecycle**, not static categories

6) CSV Classification (Critical Moment)

What You Did

- Said CSV = semi-structured → then both structured + semi-structured

Issue

Critical — Inconsistent answer under pressure

Why It Matters

This shows **lack of conceptual clarity**

Trainer Fix

“CSV is structured — because it represents tabular data... (pause)

even though it uses delimiters for parsing.”

Micro-Coaching

Avoid mid-answer correction → **commit to correct definition**

7) Fact vs Dimension Tables (22:00+)

What You Did

- Explained “fact = numeric” (incomplete)
- Got stuck when challenged deeply

Issue

Critical — Fundamental modeling gap

Why It Matters

DP-600 = data modeling heavy → this is non-negotiable

Trainer Fix

“Fact tables store measurable events — sales, quantity... (pause)
dimension tables provide context — product, customer, region.”

Micro-Coaching

Use “measure vs context” rule — never just “numeric vs categorical”

8) Star vs Snowflake Schema

What You Did

- Explained using “less data vs more data”

Issue

Critical — Incorrect reasoning

Why It Matters

Schema choice is about **normalization vs performance trade-offs**, not data size

Trainer Fix

“Star schema is denormalized — faster queries... (pause)
snowflake is normalized — less redundancy but more joins.”

Micro-Coaching

Always explain **trade-off**, not volume

9) Pressure Handling (40:00+)

What You Did

- Tried to answer everything
- Eventually said “I will check and get back” (good recovery)

Issue

Major — Over-attempting answers before stabilizing

Trainer Fix

“That’s a great question... (pause)
let me validate this and give you a precise answer after this segment.”

Micro-Coaching

Control → don’t rush → **pause before answering**

10) Demo Handling (45:00 onwards)

What You Did

- Strong end-to-end demo (workspace → lakehouse → warehouse → SQL)
- Good confidence
- Some dependency on instructions

Issue

Minor — Demo narration lacks “why”

Trainer Fix

“We’re loading data into Lakehouse first... (pause)
because it acts as staging before structured modeling in Warehouse.”

Micro-Coaching

Always narrate → **Action + Reason**

11) Closing

What You Did

- Abrupt ending
- No recap, no validation

Issue

Major — Missing learning closure

Trainer Fix

“Quick recap... (pause)

we covered ingestion → modeling → warehouse → analytics...

any questions before we wrap?”

Micro-Coaching

Always end with **recap + learner check**

Trainer Readiness Score

58 / 100

Interpretation

✗ Not Ready for Delivery

Key Gaps & Improvements

1. *Conceptual inaccuracies under pressure*

- Fix: Revise from Microsoft Learn
- Drill: Explain same concept in 3 ways

2. *Weak data modeling understanding*

- Fix: Practice fact/dimension + schema design
- Drill: Draw 5 star schemas manually

3. Answer inconsistency

- Fix: Pause before answering
- Drill: 5-sec thinking rule

4. Missing introduction + closure

- Fix: Practice opening & ending scripts
- Drill: 3 rehearsals per day

5. Demo narration lacks reasoning

- Fix: Always explain “why”
- Drill: Narrate demo without screen

6. Repetition + speech loops

- Fix: Record and reduce redundancy
- Drill: 2-min concise explanation practice

Trainer Growth Recommendations

- Revise:
 - Fabric Lakehouse vs Warehouse
 - Delta Lake fundamentals

- Star vs Snowflake schema (deep)
- Practice:
 - Scenario-based explanation
 - Q&A handling drills
 - Whiteboard-based teaching
- Use:
 - Microsoft Learn DP-600 modules
 - Fabric documentation

Manager Remarks

Niharika, this mock clearly shows that you are **stepping into advanced territory**, which is excellent. Your confidence and willingness to handle complex topics are strong positives. However, your current delivery reflects **partial conceptual control**, especially when challenged with deeper or scenario-based questions.

Right now, your delivery is **demo-driven but not concept-controlled** — and in enterprise classrooms, this gap becomes very visible. Your next focus must be on **clarity, correctness, and structured thinking**, not just coverage.

Manager Verdict

Rating: Below Expectation

Decision: **X** Not Ready for Delivery
